

FlexMonkey™ 4.0 Beta 1 with Support for Flex 4 Now Available From Gorilla Logic

*Latest Version of Open-Source Testing Tool for Flex Applications
Delivers Full Flex 4.0 Spark Component Support*

Broomfield, CO – May 11th, 2010 – Gorilla Logic, an enterprise IT consulting services firm known for its top consulting talent, today announced the availability of FlexMonkey™ 4.0 Beta 1. The new version provides support for the latest Flex 4 release from Adobe, including the entire Spark component set. With over 6,200 registered users, FlexMonkey has become the industry standard for automated record and playback testing of Adobe Flex interfaces used by companies around the world.

“The FlexMonkey 4.0 Beta 1 release delivers what our users have been asking for: support for Flex 4 including all Spark components. This lets FlexMonkey continue to answer to the Flex community’s need for quality assurance and unit testing for Flex applications,” said Eric Owens, FlexMonkey Guru, Gorilla Logic.

As a leading consulting services firm specializing in enterprise application development using Adobe Flex, HTML5, Java and mobile application development, Gorilla Logic developed FlexMonkey to deliver unparalleled quality to their Fortune 500 clients. In addition to providing a forum for the community of FlexMonkey users to assist each other ([FlexMonkey Forum](#)), Gorilla Logic also provides annual support contracts, implementation services and custom enhancement development for clients interested in optimizing their implementation of FlexMonkey.

“We use a continuous integration environment and are deploying FlexMonkey on the desktops of nearly 150 developers. For us, FlexMonkey is an option that cannot be ignored because it was obviously developed with one goal in mind – to facilitate the creation of high-quality Flex applications,” said Josse Brayelle, MAAF Assurances.

FlexMonkey is well suited for use by both developers and QA testers. It provides for regression and functional testing, and can be run from popular build systems and continuous integration environments, like CruiseControl. Gorilla Logic has assisted several companies in setting up their continuous integration environments and ensuring a production quality implementation of FlexMonkey.

In response to FlexMonkey’s value and ease-of use, Jokichi Oguri from HP commented, “The work you guys have done is incredible. May Gorillas rule the earth some day!”

FlexMonkey 4.0 Beta 1 is available today at www.gorillalogic.com/flexmonkey. Gorilla Logic also offers complete FlexMonkey training, implementation and off-shore testing services.

About Gorilla Logic

Gorilla Logic is an enterprise application development services and consulting firm known industry-wide for providing “gorilla” consultants that can dramatically improve development team productivity. Gorilla Logic has long demonstrated their industry-leading expertise in enterprise Java / JEE development, Adobe Flex / RIA development, and mobile device application development, including the iPhone, Android and Blackberry. Gorilla Logic has been engaged to ensure the success of their most mission critical projects by Fortune 500 companies as well as small and medium-sized businesses and startups in industries ranging from financial services to entertainment to aerospace and the government sector.
