

GORILLA LOGIC'S STU STERN DEMOS LATEST RELEASE OF FONE MONKEY TO LOCAL BOULDER TECH COMMUNITY

Skyrocketing demand for mobile applications leads to 'standing room only' crowd as developers look for best practices around iPhone and iPad application development

BROOMFIELD, Colo., July 7, 2011 – Gorilla Logic, (www.gorillalogic.com), a leader in enterprise application development services and creators of open source test tools for mobile and rich Internet applications, recently demonstrated the latest release of its popular open source testing tool, FoneMonkey, to a packed audience at Boulder's local iOS Meet-up event. Local technologists seeking practical tips for iPhone and iPad App development learned how FoneMonkey improves application quality by automating the detection of bugs prior to release. The product helps shorten time-to-market and reduces development and testing costs by lowering the need for resource-intensive manual testing processes.

Gorilla Logic's passion for delivering quality software applications for enterprise customers led to the creation of FoneMonkey. It is the only test tool for iOS that records all actions with the iPhone or iPad while in use and plays them back as a test script at any time. It enables the interactive creation, editing and playback of automation scripts that exercise an application's user interface. Using FoneMonkey, developers and quality assurance team members can create suites of tests that automate and perform user operation sequences, and then verify results. FoneMonkey supports development as well as QA testing, and tests can easily be incorporated into continuous integration environments.

“The strong turnout for the FoneMonkey demo shows how important iPhone and iPad applications have become to organizations of all types and sizes,” said Stu Stern, CEO of Gorilla Logic. “Since the launch of FoneMonkey we have witnessed unprecedented downloads as developers continue to seek tools and services which enable them to deliver quality software.”

Gorilla Logic continues to lead in developing open-source automated test tools for emerging development platforms. Gorilla Logic's open source testing tools have grown out of the company's extensive experience providing mobile, web and rich Internet application development services to customers, from Fortune 500 companies to next-generation Internet start-ups.

About Gorilla Logic:

Gorilla Logic provides custom enterprise application development services to many of the world's leading software-driven organizations. It has a rich history of applying software engineering best practices to reduce the time and cost of delivering high-quality, full-featured applications with advanced functionality. Its technical leadership in mobile, rich Internet and enterprise applications showcases its broad platform expertise and exemplifies its commitment to software development best practices and quality. Its innovative work with emerging development platforms led to the creation of two industry leading open source tools for automated testing, FlexMonkey (Flex applications) and FoneMonkey (iPhone/iPad Apps). To download Gorilla Logic's open source tools, and to learn more about the company and its services, please visit (www.gorillalogic.com).
